CLASS ACTION COMPLAINT

Plaintiffs James Money, William Richard, Gerald Reed, Amber Watters, Tewkunzi Green, Danny Labosette, Carl Reed, Carl “Tay Tay” Tate, Patrice Daniels, and Anthony Rodesky, individually and on behalf of a class of similarly situated individuals, by their undersigned attorneys, file this Complaint for declaratory and injunctive relief against the Defendants, Governor of the State of Illinois J.B Pritzker and Illinois Department of Corrections Director Rob Jeffreys, and allege as follows:

INTRODUCTION

1. Without urgent action by the Governor and the Illinois Department of Corrections (“IDOC”) to drastically reduce Illinois’s prison population, the novel coronavirus is likely to

spread not just inside the walls of Illinois's 28 prisons, but throughout prison communities as well. Nearly 37,000 people are incarcerated in Illinois, living in close quarters where all aspects of daily life, including healthcare and food service, take place. As with other congregate settings like nursing homes and long-term care facilities, social distancing guidelines can never be fully or effectively implemented in prison. And each day, thousands of staff must come and go from prison facilities, potentially carrying with them the novel coronavirus for days, even weeks, without ever showing symptoms. These settings pose a particular risk of spreading the virus, with catastrophic consequences not just to the prisoners and staff, but also to their communities and the hospitals that serve them.

2. To understand the devastating impact that COVID-19 will have on the Illinois prison system and the communities that house those prisons, one need look no further than Joliet, Illinois. On March 25, 2020, the IDOC announced the first confirmed case of COVID-19 at Stateville Correctional Center. Just five days later, Dr. Ngozi Ezike announced that twelve prisoners had been hospitalized with confirmed cases of COVID-19, while another 77 prisoners demonstrated symptoms but had not yet been confirmed. That same day, St. Joseph Hospital, where Stateville prisoners had been hospitalized, announced it was "overwhelmed" by inmates suffering from the effects of coronavirus and staff already were "maxed out." The hospital's medical director characterized the situation as "a disaster." The following day, Governor Pritzker confirmed at least one prisoner had died from the virus, while the number of confirmed cases among staff and prisoners continues to grow.

3. Stateville's reality might have been avoided if the Governor and IDOC had acted with the urgency and scope required to mitigate the oncoming harm. Instead, IDOC has continued to house thousands of elderly, disabled, and medically vulnerable prisoners who

could be released, many of whom are approaching their release dates and have homes in which they could more safely quarantine. To effectively prevent the continued spread of the COVID-19 infection in prison communities, the state must take urgent steps to release, furlough, or transfer to home detention all that qualify under the law, and particularly those who are elderly and medically vulnerable.

4. Every single person in IDOC custody faces a substantially increased risk of harm as a result of the Defendants' failure take reasonable measures to stop the spread of COVID-19 by refusing to reduce the number of people living in IDOC custody through the implementation of medical furlough, transfer to electronic monitoring/home detention, and other mechanisms to reduce the prison population. Even people who lack an available pathway to release are harmed because their likelihood of contracting the virus is substantially increased and their ability to access preventative sanitation resources and medical care is adversely affected.

5. Class members who are elderly and medically vulnerable, and those with pathways to release, must be released now. Now is the time to act to stop the spread of COVID-19 inside the prisons, and to protect the individuals who live and work in the prisons as well as the broader community from the serious risk of harm to their health and safety. The State is not acting with sufficient urgency, and without intervention from this Court, people are going to die unnecessarily.

JURISDICTION AND VENUE

6. This Court has jurisdiction pursuant to 28 U.S.C. §§ 1331 and 1343(a). This Court has authority to grant declaratory relief under 28 U.S.C. §§ 2201 and 2202.

7. Venue is proper in this district under 28 U.S.C. § 1391(b) because the events giving rise to the claims asserted in this complaint occurred in this judicial district.

PARTIES

8. Plaintiff James Money is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Illinois River Correctional Center in Canton, Illinois.

9. Plaintiff William Richard is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Dixon Correction Center in Dixon, Illinois.

10. Plaintiff Gerald Reed is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at the Northern Reception Center in Crest Hill, Illinois.

11. Plaintiff Amber Watters is, and has been at all relevant times, an Illinois Department of Corrections prisoner. She is currently confined at Logan Correctional Center in Lincoln, Illinois.

12. Plaintiff Tewkunzi Green is, and has been at all relevant times, an Illinois Department of Corrections prisoner. She is currently confined at Logan Correctional Center in Lincoln, Illinois.

13. Plaintiff Danny Labosette is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Robinson Correctional Center in Robinson, Illinois.

14. Plaintiff Carl Reed is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Graham Correctional Center in Hillsboro, Illinois.

15. Plaintiff Carl “Tay Tay” Tate is, and has been at all relevant times, an Illinois Department of Corrections prisoner. She is currently confined at Danville Correctional Center in Danville, Illinois.

16. Plaintiff Patrice Daniels is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Joliet Treatment Center in Joliet, Illinois.

17. Plaintiff Anthony Rodesky is, and has been at all relevant times, an Illinois Department of Corrections prisoner. He is currently confined at Pontiac Correctional Center in Pontiac, Illinois.

18. Defendant Rob Jeffreys is the Director of the Illinois Department of Corrections (“IDOC”). As such, he was acting under color of law. At all relevant times to the events at issue in this case, Defendant Jeffreys maintained administrative and supervisory authority over the operations of all prisons in Illinois. At all relevant times, Defendant Jeffreys promulgated rules, regulations, policies, and procedures of the IDOC. Defendant Jeffreys is sued in his official capacity.

19. Defendant Governor of Illinois J.B. Pritzker has, pursuant to the Illinois Constitution, Article V, Section 8, “the supreme executive power, and shall be responsible for the faithful executive of the laws.” Governor Pritzker has the ultimate authority for ensuring that all executive agencies, including the Department of Corrections, function in compliance with state and federal law.

FACTUAL ALLEGATIONS

I. The COVID-19 Outbreak Has Created a National and Global Health Emergency

20. We are living in the midst of an extreme, unprecedented worldwide health emergency caused by the rapid spread of the coronavirus, COVID-19. The World Health Organization has declared COVID-19 to be a global pandemic.¹ On March 9, 2020, Illinois Governor J.B. Pritzker issued a proclamation declaring a disaster in the State of Illinois.² On March 13, 2020, President Trump declared a national emergency.³

21. The number of known COVID-19 infections is increasing daily. As of April 1, 2020, there were more than 823,000 reported COVID-19 cases throughout the world and more than 40,500 people had died as a result of the virus.⁴ In the United States alone, there are over 186,000 confirmed cases and over 3,600 deaths.⁵ In Illinois, there are over 6,900 confirmed cases and 141 deaths.⁶ The number of COVID-19 cases in the United States is expected to grow exponentially. The Centers for Disease Control and Prevention (“CDC”) projects that without

swift and effective public health interventions, over 200 million people in the U.S. could be infected with COVID-19 over the course of the epidemic, with as many as 1.7 million deaths.⁷

22. COVID-19 is a particularly contagious disease. A recent study showed that the virus can survive for up to three hours in the air, four hours on copper, up to twenty-four hours on cardboard, and up to two to three days on plastic and stainless steel.⁸ Indeed, a new study of an early cluster of COVID-19 cases in Wuhan, China revealed the dangers of indirect transmission resulting from infected people contaminating common surfaces—in the study, it was a communal mall bathroom.⁹

23. Controlling the spread of COVID-19 is made even more difficult because of the prominence of asymptomatic transmission—people who are contagious but who exhibit no symptoms, rendering ineffective any screening tools dependent on identifying disease symptoms.¹⁰

24. There is no known vaccine or cure for COVID-19. No one is immune.

25. Common symptoms of COVID-19 include fever, cough, and shortness of breath.¹¹ Other symptoms include congestion, sneezing, fatigue, or diarrhea.¹² Many individuals who become infected with COVID-19 may have mild or moderate symptoms; some may

experience no symptoms at all. Other patients may experience severe symptoms requiring intensive medical intervention.¹³ However, even with hospitalization and intensive treatment, thousands of individuals have died as a result of this infection. Regardless of the type of severity of symptoms, all infected persons are contagious and can rapidly transmit the virus from person to person without proper public health interventions.¹⁴ The virus is known to spread from person to person through respiratory droplets, close personal contact, and from contact with contaminated surfaces and objects.¹⁵

26. People over the age of fifty-five face greater chances of serious illness or death from COVID-19. In a February 29, 2020 WHO-China Joint Mission Report, the preliminary mortality rate analyses showed that individuals age 70-79 had an overall 8% mortality rate, individuals age 60-69 had a 3.6% mortality rate, and individuals age 50-59 had a 1.3% mortality rate. For individuals age 40-49, the mortality rate was 0.4%, and for individuals 40 years and younger, the mortality rate was as low as 0.2%.¹⁶

27. People of any age who suffer from certain underlying medical conditions are also at elevated risk, including people with respiratory conditions including chronic lung disease or moderate to severe asthma; people with heart disease or other heart conditions; people who are immunocompromised as a result of cancer, HIV/AIDS, or any other condition or related to treatment for a medical condition; people with chronic liver or kidney disease or renal failure

(including hepatitis and dialysis patients); people with diabetes, epilepsy, hypertension, blood disorders (including sickle cell disease), inherited metabolic disorders; and people who have had or are at risk of stroke.¹⁷ The WHO-China Joint Mission Report indicates that the mortality rate for those with cardiovascular disease was 13.2%, 9.2% for diabetes, 8.4% for hypertension, 8.0% for chronic respiratory disease, and 7.6% for cancer.¹⁸

28. For these vulnerable populations, the symptoms of COVID-19, particularly shortness of breath, can be severe, and complications can manifest at an alarming pace. Most people in higher risk categories who develop serious illness will need advanced support. This level of supportive care requires highly expensive and specialized equipment, including ventilators, that are in limited supply.¹⁹

29. Increasingly, and in the United States in particular, even some younger and healthier people who contract COVID-19 may require hospitalization for supportive care, including intravenous fluids and supplemental oxygen.²⁰ Medical providers and medical facilities are in peril of becoming completely overwhelmed and beyond capacity to provide this type of intensive care as COVID-19 continues to spread.²¹

30. Even for those who survive COVID-19, recent clinical evidence indicates that in persons who suffer severe symptoms, the virus may also cause damage to organs such as the heart, the liver, and the kidneys, as well as to organ systems such as the blood and the immune

²¹ *Id.*

system. This damage is so extensive and severe that it may be enduring. Among other things, patients who suffer severe symptoms from COVID-19 end up having damage to the walls and air sacs of their lungs, leaving debris in the lungs and causing the walls of lung capillaries to thicken so that they are less able to transfer oxygen going forward. Indeed studies of some recovered patients in China and Hong Kong indicate a declined lung function of 20% to 30% after recovery.²²

31. The only way to prevent complications and the enormous risk to medically vulnerable people is to prevent them from becoming infected. Everyone is at risk of transmission of COVID-19. There is no available vaccine to protect against infection from COVID-19 and no medications approved to treat it.²³ The CDC and other public health agencies have universally prescribed social distancing—every person should remain at a distance of at least six feet from every other person—and rigorous hygiene—including regular and thorough hand washing with soap and water, the use of alcohol-based hand sanitizer, proper sneeze and cough etiquette, and frequent cleaning of all surfaces—as the only ways to meaningfully mitigate the spread of this virus.²⁴

²⁴ Coronavirus Disease 2019 (COVID-19): How to Protect Yourself, CDC, https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/prevention.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2F2019-ncov%2Fprepare%2Fprevention.html (last visited Mar. 29, 2020).

32. The CDC has issued a guidance that gatherings of more than 10 people must not occur.²⁵ People in congregate environments, which are places where people live, eat, and sleep in close proximity, face increased danger of contracting COVID-19, as already evidenced by the rapid spread of the virus in cruise ships and nursing homes. The CDC also warns of “community spread” where the virus spreads easily and sustainably within a community where the source of the infection is unknown.²⁶

33. On March 20, 2020, Illinois Governor Pritzker took the strictest measure yet to fight the virus’s spread, issuing a “stay at home” executive order for all residents effective starting March 21, 2020 through at least April 7, 2020; which was then extended to April 30, 2020.²⁷ The order directs all non-essential business and operations to cease. People are allowed to leave their homes only for essential activities. Any gathering larger than 10 people is prohibited, and people are recommended to stay at least six feet away from others. Restaurants, bars, schools, parks, and libraries have all been shut down. In a statement to the public, Governor Pritzker explained that his order was based on his conversations with “some of the best medical experts, epidemiologists, mathematicians, and modelers,” and all recommended a stay at home order “to avoid the loss of potentially tens of thousands of lives.”²⁸

²⁵ Interim Guidance for Coronavirus Disease 2019 (COVID-19), Guidance as of 3/15/2020, <https://www.cdc.gov/coronavirus/2019-ncov/community/large-events/mass-gatherings-ready-for-covid-19.html> (last visited Apr. 1, 2020).

²⁸ Gov. J.B. Pritzker issues order requiring residents to ‘stay at home’ starting Saturday, Chicago Tribune, Mar. 20, 2020, <https://www.chicagotribune.com/coronavirus/ct-coronavirus-illinois-shelter-in-place-lockdown-order-20200320-teedakbfw5gvdgmnaxlel54hau-story.html>

34. Governors around the country, including in California, New York, and Connecticut, have issued similar stay at home orders to curb the spread of the virus.²⁹

35. Recognizing the imperative of social distancing, Circuit Court Chief Judge Timothy Evans ordered that the Cook County courts be largely closed to the public, that all hearings be conducted via videoconference wherever possible, and that all individuals in the courthouses maintain a minimum distance of six feet from all other individuals.³⁰ This Court, joined by other district courts in the state and across the country, have continued all criminal and civil jury trials because the imperative of social distancing “render[s] juror participation difficult or unsafe.”³¹

II. Incarcerated People Are Particularly Vulnerable to Infection from COVID-19

36. None of the recommended measures for mitigating the spread of COVID-19 are available for persons confined in correctional facilities and for those who must interact with them. Correctional facilities are inherently congregate environments, where large groups of people live, eat, and sleep in close contact with one another. It is impossible to achieve social distancing standards in these settings.³² Therefore infectious diseases, particularly airborne diseases, such as COVID-19, are more likely to spread rapidly between individuals in correctional facilities.³³

37. The risk of contracting an infectious disease is also higher in correctional facilities because the facilities are not sanitary environments. People share toilets, sinks, and showers, and

Order 263 (Mar. 30, 2020); U.S. District Court for the Central District of Illinois, Am. Gen. Order 20-01 (Mar. 18, 2020).

³² Greifinger Aff., Exhibit 1; Haney Decl., Exhibit 3.

³³ Beyrer Aff., Exhibit 4; Meyer Decl., Exhibit 2.

often have limited access to soap, hand sanitizer, hot water, and other necessary hygiene items. Surfaces are infrequently washed, if at all, and cleaning supplies are in short supply.³⁴ These needs are now multiplied and also compounded by the lack of personal protective equipment (PPE) such as masks and gloves for either staff or prisoners. This means there are more people who are susceptible to getting infected all congregated together in a context in which fighting the spread of an infection is nearly impossible.

38. Given the history of epidemiologic outbreaks in correctional facilities, such as Tuberculosis, influenza, and MRSA, it is expected that COVID-19 will also readily spread in prisons, especially when people cannot engage in proper hygiene and adequately distance themselves from infected residents or staff.³⁵

39. The people who live in these environments—environments that defy all current public safety standards—are themselves at high risk due to the high rates of chronic health conditions, substance use, mental health issues, and aging and chronically ill populations who may be vulnerable to more severe illnesses, and to death, after infection from COVID-19.³⁶ As Dr. Craig Haney, a correctional health expert, explains, prisoners are “unusually vulnerable to stress-related and communicable diseases. Formerly incarcerated persons suffer higher rates of certain kinds of psychiatric and medical problems. Incarceration leads to higher rates of morbidity (illness rates) and mortality (i.e., it lowers the age at which people die).”³⁷

40. Additionally, many correctional facilities lack an adequate medical care infrastructure to address the spread of infectious disease, like COVID-19, and treat high-risk

³⁴ Greifinger Aff., Exhibit 1; Meyer Decl., Exhibit 2; Beyrer Decl., Exhibit 4; Haney Decl., Exhibit 3.

³⁵ Beyrer Decl., Exhibit 4.

³⁶ *Id.*

³⁷ Haney Aff., Exhibit 3.

people in custody.³⁸ Prison health units are not equipped with sufficient emergency medical equipment, such as oxygen tanks, nasal cannulae, and oxygen face masks, to respond to an outbreak of patients with respiratory distress. For these reasons, among others, experts have warned that, “widespread community transmission of COVID-19 within a correctional institution is likely to result in a disproportionately high COVID-19 mortality rate.”³⁹ Prisons and jails rely on outside community hospitals to provide more advanced and intensive medical care, and during an epidemic, this will not be possible, as those outside facilities will likely be at or over capacity themselves.⁴⁰

41. Prisons are not closed environments. By necessity, members of the free community, including correctional officers, social workers, attorneys, medical personnel, and many others must enter and leave the prisons on a daily basis. Staff arrive and leave each facility three times a day in large numbers, and there is little to no ability to adequately screen staff for new, asymptomatic infection. When the COVID-19 virus occurs and spreads within a prison, all persons, staff and prisoners alike, are at heightened risk of contracting the virus and, in turn, spreading the virus to others with whom they come in contact in their own homes and neighborhoods.⁴¹

42. At the Governor’s March 29, 2020, daily briefing on the coronavirus situation, IDPH Director Dr. Ngozi Ezike acknowledged the present danger that when the infection enters prisons, the congregate nature of these facilities, with staff coming and going from the

³⁸ Greifinger Aff., Exhibit 1; Meyer Decl., Exhibit 2.

⁴⁰ Meyer Decl., Exhibit 2.

⁴¹ Greifinger Aff., Exhibit 1.

community each day in large numbers, will “increase the rate of infection and its fast spread through these facilities.”⁴²

43. On March 30, 2020, following the death of a COVID-19 patient at Stateville, Dr. Ezike again acknowledged the heightened risk posed by correctional settings and the inability to conform them to public health standards:

Congregate settings such as Stateville, any other correctional center, pose unique challenges in stopping the spread of disease and protecting the health of individuals who live and work there. Those who are incarcerated obviously live and work and eat and study and recreate all within that same environment, heightening the potential for COVID-19 to spread really quickly once it’s introduced.

The options for isolation of COVID-19 cases are limited in this focused setting and it becomes very difficult depending on the size of the facility and the population that’s already in the facility. Ideally, all cases should be isolated individually and close contact should be quarantined individually. I know our partners at the Department of Corrections are working innovatively to try to create the best situations for these, for these facilities. But some facilities and correctional centers do not have enough individual cells, and so we are considering isolating multiple laboratory confirmed COVID-19 cases together as a group, or quarantining close contacts of a particular case together as a group.⁴³

44. The devastating impact that a COVID-19 outbreak in IDOC will have on surrounding communities is already a reality. Stateville Correctional Center announced its first confirmed case on Wednesday, March 25, 2020, and by Monday evening, March 30, 2020, St. Joseph Hospital in Joliet was “overwhelmed” by inmates suffering from the effects of coronavirus and staff were “maxed out.”⁴⁴ The hospital’s medical director, Dr. John Walsh, said, “This is a disaster because what I most fear is that without some resolution, the number of

⁴² The Governor’s Press Conferences are available for streaming at: <https://www.nbcchicago.com/news/local/watch-live-daily-coronavirus-briefing-from-illinois-health-officials/2234359/> (last visited March 31, 2020).

⁴³ Available at: <https://www.nbcchicago.com/news/local/watch-live-daily-coronavirus-briefing-from-illinois-health-officials/2234359/> (last visited March 31, 2020).

⁴⁴ abc7 Chicago, Illinois Prisoners Sick with COVID-19 Overwhelm Juliet Hospital (video), available at <https://abc7chicago.com/health/illinois-prisoners-sick-with-covid-19-overwhelm-joliet-hospital/6064085/> (last visited Mar. 31, 2020).

cases coming in from Stateville will become excessive. We currently have nine inmates on ventilators, critically ill. There was four in the emergency department a couple of hours ago, and I believe the volume of patients there is huge. In addition, something has to be done at Stateville. You will have a huge epidemic, remembering that 20% of the people who contract this virus are probably gonna end up in hospital and a number of them are gonna die. This could end with up to 100 inmates dying if this is out of control, and they are not isolated well at this point.”⁴⁵ St. Joseph Hospital is now caring for 17 prisoners from Stateville, 9 of whom are in intensive care on ventilators. Other prison communities throughout Illinois are similarly situated, many with far fewer intensive care beds available to provide care when an outbreak occurs. To prevent the crisis now occurring in Joliet from repeating and worsening across the state, effective mitigation measures must be taken now.

III. Reducing the Prison Population Is the Only Meaningfully Means to Prevent the Harm Caused by COVID-19 in Prisons and their Surrounding Communities

45. Because the public health and safety measures cannot be fully achieved in correctional facilities, other steps must be taken to save lives and protect the spread of the infection from these communities. Proactive risk mitigation, including eliminating close contact in congregate environments, is the only effective way to prevent the spread of the COVID-19 infection. In fact, a study published in the Journal of Travel Medicine found that the number of COVID-19 cases on the Diamond Princess cruise ship would have been more than eight times

⁴⁵ *Id.*

lower if the ship had been evacuated in a timely manner, rather than requiring the passengers to quarantine within the close confines of the ship.⁴⁶

46. Public health experts with experience in correctional settings have similarly recommended the release from custody of people most vulnerable to COVID-19 to protect the communities inside and outside the prisons, and to slow the spread of the COVID-19 infection. Population reduction protects the people with the greatest vulnerability to COVID-19 from transmission of the virus, and also allows for greater risk mitigation for all people held or working in a correctional facility. Because prisons are often located in small rural communities, removing the most vulnerable people from custody also reduces the burden on those region's limited health care infrastructure by reducing the likelihood that an overwhelming number of people will become seriously ill from COVID-19 at the same time and require hospitalization in these small communities.

47. Dr. Robert Greifinger, a correctional health expert, has concluded that “[r]isk mitigation is the only viable public health strategy available to limit transmission of infection, morbidity and mortality in prisons, and to decrease the likely public health impact outside of the prisons. Even with the best-laid plans to address the spread of COVID-19 in prisons, the release of individuals, prioritizing the most medically vulnerable individuals, is a key part of a risk mitigation strategy . . . Additionally, the release of detainees who present a low risk of harm to the community is also an important mitigation strategy as it reduces the total number of detainees in a facility.”

⁴⁶ Sandoiu, supra (Citing Rocklov J., Sjodin H., Wilder-Smith A., COVID-19 Outbreak on the Diamond Princess Cruise Ship: Estimating the Epidemic Potential and Effectiveness of Public Health Countermeasures. *Journal of Travel Medicine* (Feb. 28, 2020), <https://academic.oup.com/jtm/advance-article/doi/10.1093/jtm/taaa030/5766334>

48. Dr. Greifinger explains that reducing the prison population “has a number of valuable effects on public health and public safety: it allows for greater social distancing, which reduces the chance of spread if virus is introduced; it allows easier provision of preventive measures such as soap for handwashing, disinfecting supplies for surfaces, frequent laundering and showers, etc.; and it helps prevent overloading the work of detention staff, which will likely be reduced by illness, such that they can continue to ensure the safety of detainees.”

49. Similarly, Dr. Craig W. Haney, a Distinguished Professor of Psychology and UC Presidential Chair at the University of California Santa Cruz, recommends that “adult prisons must reduce their populations urgently in order to allow the necessary social distancing in response to the COVID-19 Pandemic.”⁴⁷

50. Professor Chris Breyer, professor of Epidemiology at John Hopkins Bloomberg School of Public Health, has concluded: “While every effort should be made to reduce exposure in detention facilities, this may be extremely difficult to achieve and sustain. It is therefore an urgent priority in this time of national public health emergency to reduce the number of persons in detention as quickly as possible.”⁴⁸

51. Dr. Jaimie Meyer, Assistant Professor of Medicine at Yale School of Medicine and Assistant Clinical Professor of Nursing at Yale School of Nursing, has concluded that “[r]educing the size of the population in jails and prisons can be crucially important to reducing the level of risk both for those within those facilities and for the community at large.”⁴⁹ She explains that “[h]ealth in jails and prisons is community health. Protecting the health of

⁴⁷ Haney Decl., Exhibit 3.

⁴⁸ Breyer Decl., Exhibit 4.

⁴⁹ Meyer Decl., Exhibit 2.

individuals who are detailed in and work in these facilities is vital to protecting the health of the wider community.”⁵⁰

52. Dan Pacholke, a corrections expert with more than 37 years of experience, has specific recommendations for steps IDOC can take to proactively respond to COVID-19 to protect the health and safety of people in IDOC custody and IDOC staff.⁵¹ Mr. Pacholke explains: “Among those steps is considering how IDOC can exercise its authority and discretion . . . to reduce the prison population. This includes awarding good time credits, transferring people to home detention, and authorizing medical furloughs.”⁵² Mr. Pacholke further explains that “[a]ll of these and any other options should be fully utilized to allow individuals to maintain social distancing and have better access to testing and treatment. This will also help mitigate the impact of staff shortages and lessens the burden on prison medical services.”⁵³

53. Internationally, governments have recognized the threat posed by COVID-19 in correctional facilities and have released detainees. In Iran, for example, about 70,00 people were temporarily released from jails to curb the spread of COVID-19.⁵⁴

54. In the United States, the need to address the COVID-19 problem in prisons has been recognized on a national level. The COVID-19 stimulus package passed by Congress specifically includes funding for federal prisons to purchase personal protective gear and tests kits for COVID-19 because of the “density of the inmate population, the high traffic, the high

⁵⁰ *Id.*

⁵⁴ Iran Temporarily Releases 70,000 Prisoners As Coronavirus Cases Surge, Reuters (Mar. 9, 2020), <https://www.reuters.com/article/us-health-coronavirus-iran/iran-temporarily-releases-70000-prisoners-ascoronavirus-cases-surge-idUSKBN20W1E5>

volume of inmates, [and] the high rate of turnover of inmates and personnel.”⁵⁵ The bill authorizes the Attorney General to lengthen the maximum amount of time that a federal prisoner can be placed in home confinement during the pandemic.⁵⁶

55. On March 30, 2020, the United States House of Representatives Committee on the Judiciary recommended a similar plan of action, calling on the federal Bureau of Prisons to drastically increase its population reduction efforts, including through release where viable and increased use of home detention.⁵⁷

56. Echoing the calls of advocates and medical professionals, a group of 35 elected prosecutors have called on leaders within the criminal legal system to “dramatically reduce the number of incarcerated individuals and the threat of disastrous outbreaks.”⁵⁸

57. A number of states have begun to take steps to protect people in prisons from the impending spread of COVID-19 by releasing people in an effort to reduce populations.

58. In California, Governor Newsom announced his plans to accelerate the release of 3,500 people from state prisons in an effort to reduce the population as COVID-19 infections continue to spread in the prisons.⁵⁹ This announcement comes in advance of a court hearing schedule to begin later this week to determine if more individuals should be released.

59. The Iowa Department of Corrections has announced that the DOC is expediting the release of about 700 prisoners, or 7% of its population, who are approved for parole or work release.⁶⁰

60. In New York, Governor Cuomo ordered the release of more than 1,000 people who are in prisons and jails across the state on the basis of a parole violation.⁶¹

61. In Colorado, Governor Polis issued an executive order that suspended the caps and criteria Colorado places on the accrual of good time credits in order to allow the DOC to award earned time credits to “facilitate the reduction of the population of incarcerated persons and parolees to prevent an outbreak in prisons.”⁶² Additionally, the Colorado governor suspended and relaxed the criteria for individuals to be released to Special Needs Parole.⁶³

62. The Vermont Department of Corrections has worked to reduce its population: “[t]he goal is to reduce our (inmate) population so we can start spreading out the remaining population.”⁶⁴ Jim Baker, commissioner for the Department, stated that they “started by looking at which inmates can be let out on furlough and who can be released on probation.”⁶⁵ Since late

⁶⁵ *Id.*

February, the Vermont DOC has released over 200 prisoners (from a population of approximately 1600), with 100 prisoners being released in the past week.⁶⁶

63. Other states, like Oklahoma and Wisconsin, have taken more moderate, and thus less effective, steps to reduce the populations in prisons by only halting new admissions from county jails into state prison facilities.⁶⁷

64. Several counties with significant jail populations have also undertaken measures to reduce their facility's population in an effort to slow the spread of COVID-19. Many of these steps have included drastically reducing the jail populations within a matter of weeks, or sometimes days. Counties on the West Coast have been the sites of several large scale jail population reductions. Counties in California in particular have seen significant reductions. The Los Angeles County Sheriff decreased the jail population by ten percent by releasing 1,700 individuals within the last month.⁶⁸ In Alameda County in Northern California, more than 300 individuals have been released from jail in the span of two weeks, amounting to eleven percent of the jail's population.⁶⁹ Oregon has similarly reduced its jail population in Washington County, outside Portland, by more than 120 inmates (from a population of 574), freeing up

Judge LeRoy Martin in the Circuit Court of Cook County issued an order for an expedited bond process for specific classes of defendants, including those charged with low-level felonies, those detained on a cash bond they cannot afford, medically-vulnerable detainees, those serving a jail sentence, and those locked up on a probation or parole violation warrant.⁹⁵

IV. IDOC and Governor Pritzker Are Failing to Take Necessary Precautions to Reduce the Spread of COVID-19 Within Prisons and Their Surrounding Communities, Placing People at an Increased Risk

69. The IDOC operates 28 adult correctional facilities throughout the State of Illinois and houses around 37,000 individuals. There are 11,600 individuals employed by the IDOC.

70. Illinois prisons are on the cusp of an outbreak, but there is still time for urgent and decisive action that can prevent harm. The first confirmed cases of COVID-19 in IDOC occurred on Wednesday, March 25, 2020—three prisoners and three staff tested positive for COVID-19, and 10 additional prisoners were tested and were awaiting results.

71. As of April 1, 2020, there are 52 confirmed prisoners who have COVID-19 in two different correctional centers (Stateville and North Lawndale ATC) and 25 confirmed staff who have the virus in seven different correctional centers (Stateville NRC, Stateville, Sheridan, North Lawndale ATC, Menard, Joliet Treatment Center, and Crossroads ATC).⁹⁶ There are 187 additional prisoners who were tested and are awaiting results.⁹⁷ However, the actual number of individuals with COVID-19 in IDOC is likely much higher.

⁹⁵ Matt Masterson, COVID-19 Case at Cook County Jail Prompts More Calls for Mass Detainee Release, WTTW News (Mar. 23, 2020), <https://news.wttw.com/2020/03/23/covid-19-case-cook-county-jail-prompts-more-calls-mass-detainee-release>

74. Neither the Governor nor the IDOC have acted with the urgency or decisiveness that is required to quell this oncoming crisis. The Governor has not taken any steps to substantially reduce the population or expand IDOC's ability to release, furlough, or transfer to home detention even those who are medically vulnerable. IDOC has taken only limited steps to this end, releasing far fewer than it could even in cases of those who are medically vulnerable and close to the end of the incarceration period anyway.

75. Even before COVID-19 entered IDOC, activists, community organizers, and civil rights lawyers began advocating for de-population efforts in IDOC to curb the spread. On March 17, 2020, advocates sent a letter to Governor Pritzker urging him to order IDOC to release individuals who can be released from custody in a way that is consistent with public safety. The letter outlined a number of specific actions Governor Pritzker should take to protect the vulnerable individuals in IDOC custody, as well as the staff who work there, including: (1) immediately ordering the release of individuals whose release dates are within 120 days; (2) release all individuals in custody awaiting parole revocation hearings; (3) prioritize release for any individuals whose release plans are pending host site approval; (4) order IDOC to stop taking people into custody for parole violations unless they present a clear and present danger of imminent physical harm, and rescind all parole warrants; (5) release individuals with viable clemency petitions; (6) take all actions necessary to maximize good time credits; (7) evaluate individuals who are pregnant, postpartum, or living with their infants in IDOC programs; (8) evaluate individuals with HCU living assignments and chronic care needs for consideration of early release; (9) take steps to limit intake into IDOC facilities; and (10) ensure that the IDOC

has the resources necessary to combat a possible COVID-19 outbreak in one or more IDOC facilities.¹⁰⁴

76. Illinois law provides several established mechanisms for reducing the prison population, all of which are available to the Governor and Director in this emergency. The Governor and Director of IDOC have authority pursuant to various Illinois statues to reduce the population in Illinois prisons. Pursuant to 730 ILCS 5/3-11-1(a)(2), the IDOC may release a person from prison on medical furlough “to obtain medical, psychiatric or psychological services when adequate services are not otherwise available.” The IDOC therefore has statutory authority to release on medical furlough individuals who are medically vulnerable to COVID-19 either due to age or pre-existing medical conditions.

77. Pursuant to the Electronic Monitoring and Home Detention Law, 730 ILCS 5/5-8A-1 *et seq.* (“Home Detention Law”), IDOC has the authority and obligation to implement procedures through which eligible prisoners may serve a portion or all of their custodial sentence in home detention. The Home Detention Law directs the Department to issue administrative directives to allow for specifically enumerated categories of state prisoners to serve portions of their sentence in home detention. Pursuant to 730 ILCS 5/5-8A-3(d), IDOC may place a prisoner in an electronic monitoring or home detention program if that person is over 55 years old, has 12 months or less to serve on their sentence, has served at least 25% of their sentenced prison term, and is serving a sentence for conviction of an offense other than for certain sex offenses.

¹⁰⁴ March 17, 2020 Letter, Exhibit 6.

78. Pursuant to 730 ILCS 5/5-8A-3(e), IDOC may place a person of any age serving a sentence for conviction of a Class 2, 3, or 4 felony offense which is not an excluded offense in an electronic monitoring or home detention program at any time.

79. Pursuant to 730 ILCS 5/5-8A-3(b) and (c), IDOC may place a person of any age serving a sentence for conviction of a Class 1 or Class X felony offense, other than an excluded offense, in an electronic monitoring or home detention program for a period not to exceed the last 90 days of incarceration.

80. Pursuant to the Administrative Code, 20 Ill. Adm. Code 107.210, the Director of IDOC may award to eligible prisoners up to 180 days of discretionary good conduct credit.

81. On March 23, 2020, advocates sent a detailed memo to the Governor's office, setting forth further details of who the IDOC could and should be releasing based on these relevant statutes and administrative directives. This memo emphasized that IDOC should identify and release as many individuals as possible who are medically vulnerable with regard to COVID-19 as well as people who are over the age of 55. The memo also urged the Governor's Office to order IDOC to immediately, *inter alia*: (1) transfer to home detention and electronic monitoring all eligible people serving sentences for Class 2-4 felonies pursuant to 730 ILCS 5/5-8A-3(e); (2) transfer to home detention and electronic monitoring all eligible people over the age of 55 who have less than 12 months left to serve on their sentence pursuant to 730 ILCS 5/5-8A-3(d); and (3) award discretionary good time credit pursuant to 20 Ill. Adm. Code 107.210 to the furthest extent possible to all eligible individuals to facilitate immediate and continuing releases.¹⁰⁵

¹⁰⁵ March 23 Letter, Exhibit 7.

82. Despite this pressure from advocates, and despite the Governor’s own admissions that people in IDOC custody are especially vulnerable to contracting and spreading COVID-19, the IDOC is not utilizing its authority with any degree of urgency to identify and release medically vulnerable prisoners or prisoners who otherwise qualify for early release.

83. On March 31, 2020, officials publicly announced that IDOC has released around 300 individuals—or less than one percent of the prison population.¹⁰⁶ This number is far lower than the population reduction needed to protect those who remain in custody and the surrounding communities. Moreover, many who qualify for release and are medically vulnerable remain in custody, including named plaintiffs here, putting their lives in jeopardy.

84. Corrections expert Dan Pacholke has opined that IDOC should “determine who, including those still housed in prisons, and those on work release, is within the categories . . . that IDOC or other body has the legal authority to release or transfer, and establish objective criteria, such as having an appropriate release address, to establish who could safely be released or transferred to a non-prison setting, even though many might still remain in IDOC custody. The criteria adopted should be designed to significantly reduce the prison population.”¹⁰⁷

85. If IDOC does not act immediately to reduce its prison population, COVID-19 is likely going to spread rapidly throughout IDOC, overburdening IDOC’s medical care program and resulting in likely deaths.¹⁰⁸

¹⁰⁶ The Governor’s Press Conferences are available for streaming at: <https://www.nbcchicago.com/news/local/watch-live-daily-coronavirus-briefing-from-illinois-health-officials/2234359/> (last visited March 31, 2020).

¹⁰⁷ Pacholke Decl., Exhibit 5.

¹⁰⁸ Haney Decl., Exhibit 3.

V. IDOC's Medical Care Program is Gravely Under-Resourced and Under-Functioning, and is Not Capable of Managing COVID-19

86. Even before COVID-19, IDOC's medical care program was ill-equipped to meet the medical needs of prisoners in its care. For over a decade, IDOC has been mired in litigation over its consistent failure to maintain a minimally adequate system. *See Lippert v. Jeffreys*, No. 10 cv 4603 (N.D. Ill.). In 2014 and again 2018, the *Lippert* court appointed teams of independent experts to conduct exhaustive reviews of IDOC's medical system, both of which exposed a system in dire need of reform. In October 2018, the team of experts issued a 1200-page report, reaching the following the conclusions:

- a) The clinical care provided within IDOC was “extremely poor” and “resulted in preventable morbidity and mortality”;
- b) IDOC lacked an adequate infections disease control program;
- c) IDOC's Infectious Disease Coordinator position was vacant and had been vacant since at least 2014;
- d) Systemic sanitation problems existed at multiple IDOC facilities;
- e) IDOC's medical staff vacancy rates were “very high” and staffing was a “critical problem” throughout IDOC;
- f) Physician staffing at IDOC was “very poor,” with “persistent and ongoing vacancies” in site medical director positions, high rates of turnover, and an over-reliance on “traveling” medical directors who go from site to site;
- g) Physicians who worked at IDOC were improperly credentialed, which was “a major factor in preventable morbidity and mortality” and “significantly increase[ed] the risk of harm to patients within IDOC.”¹⁰⁹

¹⁰⁹ Exhibit 8 (*Lippert* Expert Report, October 2018) at 9-10, 21-31, 84-91.

87. Less than one year ago, IDOC agreed to a consent decree, which was approved and entered by the Court in May 2019, to begin needed reforms. *See Lippert v. Jeffreys*, No. 10 cv 4603 (N.D. Ill.), Doc. No. 1238 (consent decree). The consent decree called for the appointment of an independent monitor and a near complete overhaul of IDOC's medical system.

88. In the nine months since the *Lippert* consent decree was entered, IDOC has taken preliminary steps to comply, but circumstances within the facilities remain largely unchanged. IDOC is still only in early stages of developing a compliance plan. There has been no meaningful on the ground change yet; facilities are still critically under-staffed and under-resourced. IDOC is simply unable to adequately meet the serious medical needs of IDOC's population even under non-pandemic circumstances.

89. Even before the COVID-19 outbreak, in November 2019, the *Lippert* court monitor warned that the prevalence of elderly and infirm individuals in IDOC was straining the system.¹¹⁰ Regarding this population, the monitor noted: "It is the position of the monitor that in the short term additional IDOC resources must be directed to properly house and care for this population but in the near future the IDOC must take the lead to create a pathway to discharge those men and women whose mental and medical conditions make them no longer a risk to society to appropriate settings in the community."¹¹¹

90. Since the outbreak of COVID-19, IDOC administrators have issued memos to prisoners notifying them that their medical resources were "stretched thin" and that they needed to focus "on [their] most vulnerable patients at this time."¹¹²

¹¹⁰ Exhibit 9 (*Lippert* Court Monitor Report, November 24, 2019) at 9-10.

¹¹¹ *Id.*

¹¹² Exhibit 10 (IDOC Memorandum, COVID-19 Response).

91. As of the date of this filing, there are 48 confirmed COVID-19 cases at Stateville, with approximately 19 Stateville prisoners in outside hospitals—so many that they overwhelmed the outside hospital that typically serves Stateville residents. The situation at Stateville is so grave that the Governor had to activate Illinois National Guard service members to provide additional medical support at the prison.¹¹³ At this point there are no confirmed prisoner cases at any other prison, but there is no reason to believe that COVID-19 will not reach the other prisons. Likewise there is no reason to believe that Stateville’s tragic outcome will not repeat itself at other facilities. The time to act is now.

VI. Plaintiffs are Particularly Vulnerable

92. Plaintiffs in this case are individuals who are currently housed in prisons and who are particularly vulnerable to serious illness or death if infected by COVID-19.

93. James Money (S11097) is 28 years old and is housed at Illinois River Correctional Center in Canton, Illinois. In 2016, Mr. Money was diagnosed with Stage 3 metastatic thyroid cancer. He has undergone several surgeries, most recently in January 2020, resulting in the removal of over 80 lymph nodes and a full thyroidectomy, and is now immunocompromised. He was scheduled to begin chemotherapy treatment on March 24, 2020, but IDOC cancelled his treatment, presumably to focus instead on COVID-19. Mr. Money has already served nearly 5 years of his sentence for residential burglary out of Adams County, and he is currently scheduled to be released on June 19, 2020. He is eligible for medical furlough pursuant to 730 ILCS 5/3-11-1 and discretionary good time pursuant to 20 Ill. Adm. Code 107.210. Mr. Money is also within 90 days of his release date, so he is eligible for transfer to

¹¹³ Tina Sfondeles, Illinois National Guard medics headed to Stateville as inmate coronavirus cases rise, Chicago Suntimes (Apr. 1, 2020), <https://chicago.suntimes.com/coronavirus/2020/4/1/21202995/coronavirus-covid-19-illinois-prison-stateville-national-guard-field-hospital>

home detention pursuant to 730 ILCS 5/5-8A-3(b). Mr. Money's parole conditions have already been determined and he is approved to reside with his fiancée's residence in Warsaw, Illinois. His fiancée is fully prepared to provide for his medical needs. Mr. Money is a member of Subclasses 1, 5, and 6.

94. William Richard (M52774) is 66 years old and lives in the healthcare unit at Dixon Correctional Center. Mr. Richard has COPD, emphysema, and heart disease, and uses a wheelchair for movement. His respiratory disease requires continuous oxygen and a breathing treatment two to three times per day. He shares his roughly 12 feet by 15 feet cell with three other individuals, making social distancing impossible—his bunk is less than 5 feet from his cellmate's bunk, and all four men share a toilet, sink, and the chuckhole through which they receive their meals. Mr. Richard has less than four months remaining on his sentence, and is eligible under 730 ILCS 5/5-8A-3(d) to transfer to home detention at his mother's home. Mr. Richard is a member of Subclasses 1, 2, 3, and 6.

95. Gerald Reed (N32920) is housed at the Northern Reception Center. He is 57 years old. Mr. Reed has heart failure, hypertension, and is pre-diabetic. Mr. Reed uses a wheelchair for mobility because of a decades-old leg injury that adversely affects his mobility. Within the last year, Mr. Reed has been hospitalized for a heart attack and for pneumonia. At the NRC, he is prohibited from accessing commissary and is only provided a single, small bar of soap. Pursuant to 730 ILCS 5/3-11-1, Mr. Reed is eligible for medical furlough at his mother's home. Mr. Reed is a member of Subclasses 1 and 2.

96. Amber Watters (Y39454) is 30 years old and is housed at Logan Correctional Center in Lincoln, Illinois. Ms. Watters has neurological complications from a broken back she suffered prior to her incarceration in 2019. Prior to her incarceration, Ms. Watters was the

primary caretaker for her three minor children. She is serving two three-year sentences for low level drug offenses out of Livingston County; a Class 4 sentence for possession of heroin, and a Class 2 sentence for possession with the intent to distribute a small amount of heroin. Ms. Watters is scheduled to be released on May 1, 2020, and is eligible under 730 ILCS 5/5-8A-3(e) to transfer to home detention to her mother's home. Ms. Watters is a member of Subclass 4.

97. Tewkunzi Green (R84568) is 38 years old and is housed at Logan Correctional Center in Lincoln, Illinois. She has asthma and severe hypertension for which she takes multiple medications. In January 2019, she fainted related to hypertension and was held in the cardiology unit of an off-site hospital for several days. At Logan, Ms. Green shares a room with three other women. Ms. Green has a pending commutation petition, which was filed by the January 23, 2020, filing deadline; her hearing date of April 7, 2020 was postponed and she is now being scheduled for a non-public hearing. She is also eligible for medical furlough under 730 ILCS 5/3-11-1. Ms. Green has a stable housing plan in that her mother, who owns her own home in Peoria, Illinois, where she also cares for Tewkunzi's 13-year-old son, is willing and able to receive Ms. Green at any time. Ms. Green is a member of Subclass 1.

98. Danny Labosette (B23629) is currently housed at Robinson Correctional Center in Robinson, Illinois. Mr. Labosette is 56 years old and is a double amputee; his left leg has been amputated above the knee, and his right foot has been amputated. Mr. Labosette uses a wheelchair. Mr. Labosette also has untreated Hepatitis C. Mr. Labosette is housed in the Transitions Unit, a treatment facility within Robinson Correctional Cell. Social distancing is impossible for Mr. Labosette—he resides in a dorm with roughly 20 other men. He sleeps in the bottom bunk of a bunk bed, which is 3 feet away from the neighboring beds. Mr. Labosette has less than six months remaining on his sentence, and is eligible under 730 ILCS 5/5-8A-3(d) to be

transferred to home detention at his mother's home in Florida, which has already been modified to accommodate his disabilities. Mr. Labosette is a member of Subclasses 1, 2, and 3.

99. Carl Reed (R48993) is currently housed at Graham Correctional Center in Hillsboro, Illinois. He is 59 years old and he suffers from chronic kidney disease—requiring dialysis three days per week—diabetes, hypertension, and underlying neurological impairments. A doctor who is an expert in correctional health care has reviewed Mr. Reed's medical records and recommends his immediate release for Mr. Reed's health and safety. Mr. Reed has eight years left on his sentence, and he is eligible for medical furlough pursuant to 730 ILCS 5/3-11-1. He has a pending petition for executive clemency, and he has a stable housing plan for his release: he can live with his sister in Chicago. Mr. Reed is a member of Subclasses 1 and 2.

100. Carl "Tay Tay" Tate (R12529) is a 40-year-old transgender woman diagnosed with Gender Dysphoria, who is housed at Danville Correctional Center. Ms. Tate has almost six years left of her sentence to serve. Ms. Tate lives with hypertension, for which she takes medication. Ms. Tate also lives with severe anxiety, and the COVID-19 outbreak has only increased her anxiety. She shares a small cell with one other person. Even with current limits on the number of people in the unit who are allowed out of their cells to use the communal dayroom, Ms. Tate estimates that around 24 people may be in the dayroom at a time. She estimates that around 75 people may be in the yard. Ms. Tate also works as a laundry porter, which places her in frequent contact with other prisoners and staff. She has asked for gloves to use, and has been denied. She has also asked for more cleaning supplies to clean the dayroom, including the phones, and has been denied. It is impossible for Ms. Tate to practice social distancing in her living situation. Ms. Tate has a pending clemency petition—which has the support of 40 organizations across the state—and her hearing date of April 7, 2020 was

postponed and is being rescheduled. Ms. Tate has a stable housing plan in place for when she is released: she will live with her sister who resides in Lansing, Illinois. Ms. Tate is a member of Subclass 1.

101. Patrice Daniels (B70662) is 45 years old, serving a life sentence and not eligible for release. He is incarcerated at Joliet Treatment Center. Although this is one of the few facilities that has single occupant cells, he still shares a shower and dayroom with the other residents of this housing unit. Even with current limits on the number of people in the unit who are allowed out of their cells to use the communal dayroom, up to 8 people may be in the dayroom at a time. Mr. Daniels also works as a dietary aide, which places him in frequent contact with other prisoners and staff from outside of his housing unit each day. Mr. Daniels estimates that even with in-unit meal delivery, each person's meal is handled by approximately 6-8 other people between preparation and delivery. Mr. Daniels describes feeling "like a sitting duck" waiting for the coronavirus to strike. Mr. Daniels is a member of the Class.

102. Anthony Rodesky (R47057) is currently housed at Pontiac Correctional Center in Pontiac, Illinois. He is 49 years old and has diabetes and other chronic health conditions, and in 2015 he had a below-knee amputation. Mr. Rodesky is a New Jersey prisoner who is in Illinois custody pursuant to an interstate compact agreement between New Jersey and Illinois and he is not eligible for release. Mr. Rodesky has ongoing medical needs, and he must interact with Pontiac health care staff at least twice daily, in order to receive his insulin shots. He also must stand next to other prisoners when he leaves his cell to obtain his insulin shots. Mr. Rodesky is deeply fearful of contracting COVID-19 on account of his pre-existing medical vulnerabilities. Even if Mr. Rodesky is not exposed to COVID-19, an outbreak at Pontiac would drain medical

resources at Pontiac that he and other prisoners with chronic health conditions rely on for every day survival. Mr. Rodesky is a member of the Class.

CLASS ACTION ALLEGATIONS

103. Pursuant to Rules 23(a) and 23(b)(2) of the Federal Rules of Civil Procedure, the individual named Plaintiff bring this action on behalf of themselves and a class consisting of all people who are currently or who will in the future be housed in an IDOC prison during the duration of the COVID-19 pandemic. Plaintiffs' request for release from physical custody is limited to the following six subclasses:

- a) *Subclass 1*: People in custody who have serious underlying medical conditions that put them at particular risk of serious harm or death from COVID-19, including but not limited to people with respiratory conditions including chronic lung disease or moderate to severe asthma; people with heart disease or other heart conditions; people who are immunocompromised as a result of cancer, HIV/AIDS, or any other condition or related to treatment for a medical condition; people with chronic liver or kidney disease or renal failure (including hepatitis and dialysis patients); people with diabetes, epilepsy, hypertension, blood disorders (including sickle cell disease), inherited metabolic disorders; people who have had or are at risk of stroke; and people with any other condition specifically identified by CDC either now or in the future as being a particular risk for severe illness and/or death caused by COVID-19, and who are eligible for medical furlough pursuant to 730 ILCS 5/3-11-1.

- b) *Subclass 2*: People in custody who are medically vulnerable to COVID-19 because they are 55 years of age and older and who are eligible for medical furlough pursuant to 730 ILCS 5/3-11-1.
- c) *Subclass 3*: People in custody who are 55 years of age and older with less than one year remaining on their sentence and eligible for home detention pursuant to 730 ILCS 5/5-8A-3(d).
- d) *Subclass 4*: People who are currently in custody for Class 2, 3, or 4 offenses and who are eligible for home detention pursuant to 730 ILCS 5/5-8A-3(e).
- e) *Subclass 5*: People who are currently in custody for Class 1 or Class X offenses with less than 90 days remaining on their sentence and eligible for home detention pursuant to 730 ILCS 5/5-8A-3(b) and (c).
- f) *Subclass 6*: People in custody who are scheduled to be released within 180 days and eligible to receive sentencing credit pursuant to 20 Ill. Adm. Code 107.210.

104. A class action is the only practicable means by which the individual named Plaintiffs and the class members can challenge the Defendants' unconstitutional actions. Many members of the class are without the means to retain an attorney to represent them in a civil rights lawsuit.

105. The class and subclasses are so numerous that joinder of all members is impractical. The number of people in custody exceeds 36,000 on any given day, and each subclass contains hundreds, and sometimes thousands, of people. Plaintiffs estimate that Subclass 1 contains approximately 12,000 who live with one or more medical vulnerability based on an existing medical condition. Subclass 2 contains 4,807 people who are medically vulnerable to COVID-19 because they are 55 and older. Subclass 3 contains 700 people who are

over age 55 and have less than one year left on their sentence and eligible for transfer to home detention/electronic monitoring. Subclass 4 contains over 9,000 people who are currently in custody for Class 2, 3, or 4 offenses and eligible for transfer to home detention/electronic monitoring. Subclass 5 contains 2,401 people who are currently in custody for Class 1 or Class X offenses with less than 90 days remaining on their sentence and eligible for transfer to home detention/electronic monitoring. Subclass 6 contains 5,308 people who are eligible to be released in six months.

106. There are questions of law and fact common to all class members and the subclass, including: (1) does COVID-19 present a substantial risk of harm to people in the custody of the Illinois Department of Corrections; (2) do the Defendants have available to them measures that could reduce the number of people living in IDOC prisons, including those who are especially vulnerable to COVID-19; and (3) have the Defendants failed to act reasonably to mitigate the spread of COVID-19 and protect those in custody who are vulnerable by not fully utilizing medical furlough, home detention, and other mechanisms to reduce the prison population?

107. The claims of the named Plaintiffs are typical of those of the class as a whole. That typicality stems from their claim that Defendants have placed them at significant risk of harm by failing to take appropriate steps to address the risk of COVID-19 throughout the IDOC. Every single person in IDOC custody faces the same risk of contracting COVID-19 if the IDOC fails to take meaningful action to reduce the in-custody population. While members of Subclasses 1-2 have an increased risk of death as result of the threat of COVID-19 and Subclasses 3-5 suffer due process violations, the overarching nature of the threat of COVID-19 to every person confined in IDOC custody is sufficient to satisfy typicality.

108. The individual named Plaintiffs will fairly and adequately represent the interests of the class and subclasses. The named Plaintiffs have no conflicts with the unnamed members of the proposed class. In addition, their lawyers are experienced in federal court civil rights class actions, particularly those involving prisons and jails.

109. Defendants have refused to act in a manner that applies generally to the class as a whole, rendering class-wide injunctive and declaratory relief appropriate.

COUNT I

42 U.S.C. § 1983 Deliberate Indifference to the Serious Risk of Harm Posed by COVID-19 (Alleged by all Plaintiffs on Behalf of Themselves and the Class Against all Defendants)

110. Plaintiffs repeat and re-allege the proceeding paragraphs as if fully set forth in this Count.

111. Plaintiffs and the classes they represent have been deprived and continue to be deprived by the Defendants of their rights under the Eighth Amendment to reasonably safe living conditions. Specifically, Defendants are aware of the substantial risk of harm that COVID-19 poses to all individuals, and are further aware of the particular risks of severe illness and possible death that Plaintiffs face as a result of the inherently congregate settings in Defendants' correctional facilities. Despite this knowledge, Defendants have failed to take reasonable measures to transfer eligible people in IDOC's physical custody to medical furlough or home detention, and/or release them from IDOC custody.

112. As a result of the Defendants' actions and inactions, class members face a substantial risk of contracting COVID-19 and sustaining a serious illness that could lead to death. This harm manifests in two ways: 1) members of the subclasses who are eligible for release are unnecessarily exposed to an exponentially increased risk of contracting COVID-19 and suffering a serious illness that could lead to death for so long as they remain in IDOC's

physical custody; and 2) class members who are likely to remain in IDOC custody because they lack a statutory pathway to release are exposed to an exponentially increased risk of contracting COVID-19 and suffering a serious illness that could lead to death because IDOC has insufficient medical and sanitation resources to both prevent the spread of COVID-19 and to adequately treat those who contract the virus.

113. The Defendants' failures to take appropriate steps to curb the substantial threat posed by COVID-19 to each person in IDOC custody, as described more fully above, constitutes deliberate indifference to Plaintiffs' rights to be free from cruel and unusual punishment. Defendants know of and are disregarding a substantial risk of serious illness and/or death people face as a result of the pandemic.

114. Plaintiffs seek injunctive and declaratory relief against all Defendants to prevent the continued violation of the rights of Plaintiffs and the class they represent.

COUNT II

42 U.S.C. § 1983 Right to Due Process Under the Fourteenth Amendment (Alleged by Plaintiffs Money, Richard, Watters, and Labosette on Behalf of Themselves and Subclasses 3, 4, and 5 Against All Defendants)

115. Plaintiffs repeat and re-allege the proceeding paragraphs as if fully set forth in this Count.

116. Plaintiffs and the subclasses they represent are all eligible for transfer from IDOC physical custody under various state statutes. In the midst of this global pandemic, the Defendants have failed to establish a system-wide efficient process that would, with all deliberate speed, evaluate every individual who is eligible for transfer from IDOC physical custody to determine if that person can be transferred without compromising public safety. As a result of the Defendants' failure to establish such a process, members of these subclasses are prohibited from seeking their transfer and as a result they are forced to be exposed to the threat

of serious illness or death posed by COVID-19 in IDOC prisons, in violation of their procedural and substantive due process rights.

117. Consequently, the Defendants are in continuous violation of these Plaintiffs' rights and the rights of the members of the subclasses under the Fourteenth Amendment to the United States Constitution.

118. Plaintiffs seek injunctive and declaratory relief against all Defendants to prevent the continued violation of the rights of Plaintiffs and the class they represent.

COUNT III
Americans with Disabilities Act ("ADA")
(Alleged by Plaintiffs Money, Richard, Gerald Reed, Green, Labosette, Carl Reed, and
Tate on Behalf of Themselves and Subclass 1 Against Defendant Jeffreys)

119. Plaintiffs repeat and re-allege the proceeding paragraphs as if fully set forth in this Count.

120. Under Title II of the ADA, "no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or be denied the benefits of the services, programs, or activities of a public entity, or be subjected to discrimination by such entity." 42 U.S.C. § 12132.

121. The Illinois Department of Corrections is a public entity covered by Title II of the ADA. 42 U.S.C. § 12131.

122. Members of Subclass 1 are qualified individuals with disabilities within the meaning of the ADA in that they have physical and/or mental impairments that substantially limit one or more major life activities. 42 U.S.C. § 12102(2). Major life activities of class members that are limited include respiratory and other functions of the body such as the immune system, circulatory system, endocrine (to regulate blood sugar), kidney (the ability to cleanse and eliminate body waste), normal cell growth, digestive, bowel, bladder, neurological, brain,

circulatory, as well as limitations in breathing, eating, sleeping, thinking, concentrating, standing, and walking, among others.

123. Defendant Jeffreys is violating Title II of the ADA by holding subclass members in unduly dangerous conditions that place them at a disproportionate risk of medical complication and death because of their disability.

124. Defendant Jeffreys is violating Title II of the ADA by failing to provide subclass members the reasonable accommodations that are needed and available to protect their lives by allowing them to participate and receive the benefits of Defendant's programs, including medical furlough, release and/or transfer to home detention to allow subclass members to quarantine more safely in their homes.

125. Plaintiffs seek injunctive and declaratory relief against all Defendants to prevent the continued violation of the rights of Plaintiffs and the class they represent.

REQUEST FOR RELIEF

Wherefore, Plaintiffs on behalf of themselves and the putative class they seek to represent, request that this Court enter judgment in their favor and against Defendants J.B. Pritzker and Rob Jeffreys and order the following relief:

- a) Immediate medical furlough for members of Subclass 1: People in custody who have serious underlying medical conditions that put them at particular risk of serious harm or death from COVID-19, including but not limited to people with respiratory conditions including chronic lung disease or moderate to severe asthma; people with heart disease or other heart conditions; people who are immunocompromised as a result of cancer, HIV/AIDS, or any other condition or related to treatment for a medical condition; people with chronic liver or kidney disease or renal failure (including hepatitis and dialysis

patients); people with diabetes, epilepsy, hypertension, blood disorders (including sickle cell disease), inherited metabolic disorders; people who have had or are at risk of stroke; and people with any other condition specifically identified by CDC either now or in the future as being a particular risk for severe illness and/or death caused by COVID-19, and who are eligible for medical furlough pursuant to 730 ILCS 5/3-11-1;

- b) Immediate medical furlough to members of Subclass 2: People in custody who are medically vulnerable to COVID-19 because they are 55 years of age and older and who are eligible for medical furlough pursuant to 730 ILCS 5/3-11-1.
- c) Immediate transfer to home detention of members of Subclass 3: People in custody who are 55 years of age and older with less than one year remaining on their sentence and eligible for home detention pursuant to 730 ILCS 5/5-8A-3(d).
- d) Immediate transfer to home detention of members of Subclass 4: People who are currently in custody for Class 2, 3, or 4 offenses and who are eligible for home detention pursuant to 730 ILCS 5/5-8A-3(e).
- e) Immediate transfer to home detention of members of Subclass 5: People who are currently in custody for Class 1 or Class X offenses with less than 90 days remaining on their sentence and eligible for home detention pursuant to 730 ILCS 5/5-8A-3(b) and (c).
- f) An immediate aware of 180 days of sentencing credit to members of Subclass 6: People in custody who are scheduled to be released within 180 days and eligible to receive sentencing credit pursuant to 20 Ill. Adm. Code 107.210.
- g) Appoint a Special Masters to assist the IDOC identify people in its custody who are eligible for transfer or release.

- h) Issue an order and judgment granting reasonable attorneys' fees and costs, pursuant to 42 U.S.C. § 1988 and the Americans with Disabilities Act.
- i) Grant such other relief as this Court deems just and proper.

Dated: April 2, 2020
